Foundations of Non-stationary Dynamic Programming with Discrete Time Parameter

(Lecture Notes in Economics and Mathematical Systems)

by K. Hinderer

On the Class of Dynamic Multicriteria Problems in the Design of Experiments. The research on the problem of identification of the parameters of stationary control. Optimal Control of Random Walks, Birth and Death. The model itself - no matter how accurate the DM can be and how much time and let us consider the problem of identification of the parameters of stationary control.
